Experience

Machine Learning Internship

FlyRank AI · Internship
Jul 2026 - Sep 2026 · 3 mos
Pretoria, Gauteng, South Africa · Remote

Capstone finding: a model scoring 0.94 precision@50 on a naive split fell to 0.22 on unseen clients, below the 0.279 base rate. Completed as a Machine Learning Engineering Intern at FlyRank AI, alongside the General AI Fluency Programme.

Machine Learning Capstone
Investigated whether a model could outperform random selection when prioritizing declining content for review, using 17.7M rows of search data across 349,411 content items and 59 clients.

• Defined a data contract and conducted data leakage checks using Python.
• Compared a Random Forest and an age-and-visibility scoring rule against random selection using a client-grouped evaluation split.
• Found that precision@50 fell from 0.94 on a naive split to 0.22 on unseen clients, below the 0.279 base rate. The rule-based baseline scored 0.10.
• Recommended a human-review playbook rather than automated prioritization because neither approach generalized adequately.

General AI Fluency Programme
Completed the 10-week Programme and delivered an accepted Impact Project.

• Built and launched my engineering portfolio using HTML, CSS and GitHub Pages, featuring case studies on 5G NR-U and Wi-Fi coexistence and TOPSIS-based radio access technology selection.
• Built a Weekly Review Assistant using a Claude Project connected to Gmail and Google Calendar. Designed it for read-only operation and tested seven scenarios, including tool failure and irrelevant keyword matches.
• Conducted mobile and robustness testing on the portfolio and documented AI contributions and independent decisions using the 4D framework: Delegation, Description, Discernment and Diligence.

Tutor

MindShift Learning · Part-time
Mar 2026 - Aug 2026 · 6 mos
City of Cape Town, Western Cape, South Africa · Remote

Leveraging my background in Electrical and Computer Engineering to provide specialized academic support in STEM subjects, including Mathematics and Engineering principles.

Key responsibilities include:
• Translating complex technical concepts into accessible, structured learning materials.
• Mentoring students in advanced problem-solving methodologies and analytical thinking.
• Developing technical communication skills essential for bridging the gap between high-level theory and practical application.

Technical Communication, Analytical Skills and +2 skills

Engineering Intern

Mamoshe Investment Group (Pty) Ltd · Internship
Aug 2025 - Sep 2025 · 2 mos
Polokwane, Limpopo, South Africa · On-site

Completed six weeks of practical training (EEE3000X) contributing to the CCTV installation project at Waterberg TVET College. The role involved hands-on implementation and technical support, including installing, terminating, and testing CAT6 network cables according to the T568B standard to ensure reliable connectivity. Assisted senior engineers with configuring network switches and implementing VLANs to isolate and secure CCTV traffic from the main data network. Applied IEEE 802.3at (PoE+) principles to verify power delivery to IP cameras, considering switch power budgets and cable length limitations. Also supported prototype testing and provided general IT system assistance as required by the project team.

Vacation Work Trainee

Cape Peninsula University of Technology · Internship
Dec 2021 · 1 mo
City of Cape Town, Western Cape, South Africa · On-site

Completed a two-week intensive training program at Cape Peninsula University of Technology, covering Welding, Pneumatics, Metrology, Fitting and Turning, Robotics, and

Technology, covering Welding, Pneumatics, Metrology, Fitting and Turning, Robotics, and Basic Engineering Hand Skills. During the vacation work training program, I applied theoretical knowledge to practical tasks and developed hands-on technical skills that strengthened my understanding of industrial processes and engineering workshop practices.
