Full technical stack complete: **20/20 certifications cleared.** 🚀

I've officially completed the remaining technical specializations within my [FlyRank AI](#) internship.

While the first 10 certifications established the strategic and operational foundations for working with AI, this second series focused on the **architecture, integration, and deployment** of production-grade AI systems.

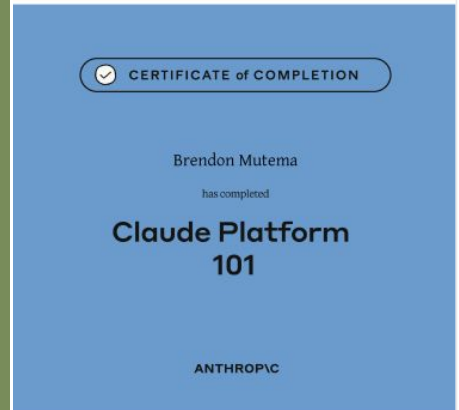

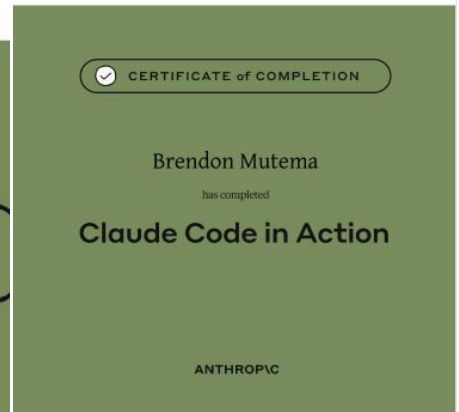

Key technical focus areas included:

- **Enterprise Infrastructure Deployment:** Working with AI model deployment across Amazon Bedrock (AWS) and Google Cloud Vertex AI ecosystems.
- **Advanced Integration Protocols:** Building Model Context Protocol (MCP) servers to connect language models with external tools, resources, and data sources.
- **High-Precision Data Retrieval:** Exploring RAG (Retrieval-Augmented Generation) pipelines using embeddings, BM25, contextual retrieval, re-ranking, and prompt caching.
- **Agentic Developer Workflows:** Working with Claude Code, custom subagents, tool use, evaluation loops, and agentic workflows for complex development tasks.
- **Architecture and Performance:** Understanding the trade-offs between model capability, latency, reliability, and cost when designing AI-powered systems.

With the full technical stack now complete, the next step is putting these concepts into practice and building rigorous, scalable systems where AI is integrated as part of the engineering architecture, not simply added as a feature.

The toolkit is ready. 🇿🇦 🟡

New Milestone: 10 technical certifications complete. 🚀

I've officially cleared the first grouping of certifications from the Anthropic Academy through my ML Engineering internship with [FlyRank AI](#).

This first set of certifications centered on the strategic and operational frameworks required to work effectively with high-performance AI systems. Moving beyond simple prompting, the modules focused on the **4D Logic Framework: Delegation, Description, Discernment, and Diligence**.

On the 4D Logic Framework. Delegation, Description, Discernment, and Diligence.

Mastering these four pillars is critical for establishing technical accountability and ensuring that AI-generated outputs meet the rigor expected in professional engineering environments.

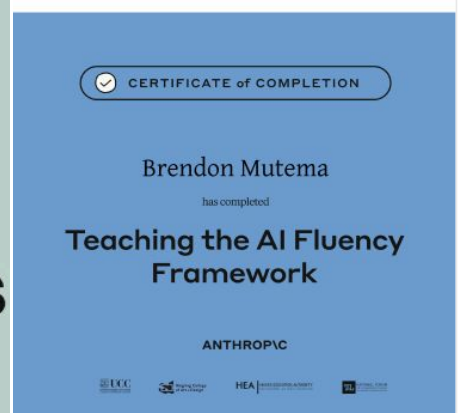

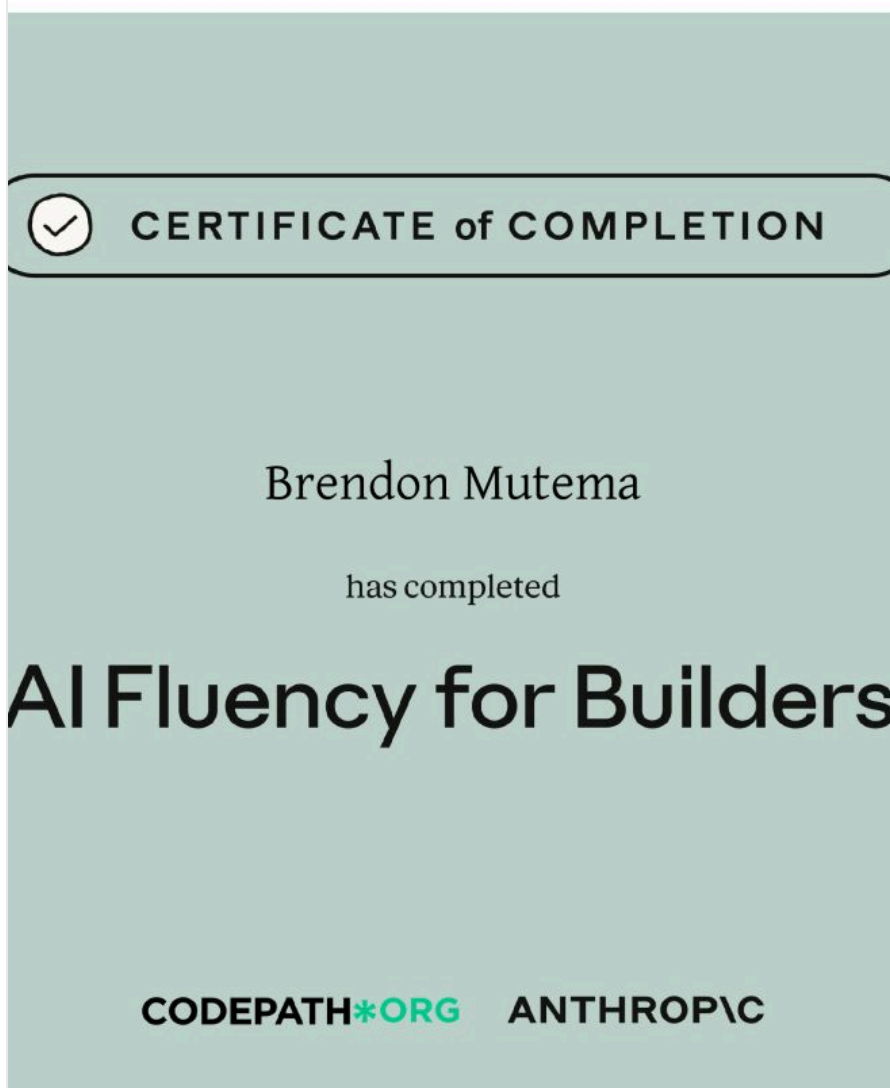

Key technical focus areas from this series included:

- **Systematic Collaboration:** Utilizing Claude Cowork to build team-integrated task loops, shared knowledge bases, and project management workflows.
- **Capabilities and Limitations Mapping:** Identifying logical boundaries and data constraints within LLMs to mitigate potential reasoning failures in professional and industrial settings.
- **Sector-Specific Logic:** Applying the 4D framework across different professional environments, from building production-ready tools for engineers to developing evaluation and teaching rubrics for educators and students.
- **The Human-in-the-Loop Requirement:** Establishing rigorous verification cycles to assess technical accuracy and ensure autonomous solutions remain grounded in real-world engineering constraints.

While foundational, this series was a necessary prerequisite for building more complex systems. It provided the methodical approach to managing technical constraints that is required before moving into large-scale implementation.

Getting the tools ready. 🇺🇸 🇿🇦 🇷🇺

Just earned my Introduction to Claude Cowork certificate from Anthropic Academy, completed through the FlyRank AI internship. Work alongside Claude on real files: the Cowork task loop, plugins and skills, file and research workflows.

Excited to keep building.

New Credential unlocked: AI Fluency: Framework & Foundations 🚀

I'm happy to share that I've completed the first phase of my ML Engineering internship with [FlyRank AI](#) through the Anthropic Academy.

Mastering the foundational frameworks and the underlying logic of modern AI models is a critical first step. I'm looking forward to building on this foundation as I dive deeper into the Machine Learning track and focus on the practical deployment of these technologies.

Ready for the next challenge. 🏗️

Excited to announce that I'm joining the team at [FlyRank AI](#) as an ML Engineering Intern! 🚀

As I prepare to begin my MSc research at the University of Cape Town focusing on the future of 5G and satellite infrastructure, I am eager to formalize my proficiency in production-ready AI. My objective is to bridge the gap between high-level engineering logic and the practical application of Machine Learning in real-world industrial systems.

It's a fast-moving space, and I'm ready to build alongside a global community of innovators from 125 countries.

Let's get to work! ZA 🇿🇦

Special thanks to [Alen Malkoč](#) and the team for the opportunity.

I am thrilled to announce that I have officially graduated from the University of Cape Town with a Bachelor of Science in Engineering in Electrical and Computer Engineering.

This journey has been one of immense perseverance. Navigating academic challenges, COVID disruptions, financial hurdles, and unexpected detours has made this achievement incredibly meaningful. I am deeply grateful for the support from my family, friends, and mentors who encouraged me every step of the way.

I am excited for the future and ready to apply the resilience and technical skills I've gained to new challenges. I am now looking forward to beginning my Master's degree and am open to connecting with professionals in the engineering and tech spaces.
